

# ENLARGING YOUR PHOTO WITHOUT A PROJECTOR

There are two ways to do it.

1. Trace the shapes from your original photo. Like this:

In this case, you will then enlarge the TRACING.

OR

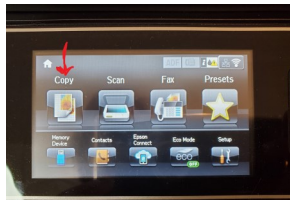

2. Enlarge your photo first. Then trace the shapes from the enlarged photograph, like this:

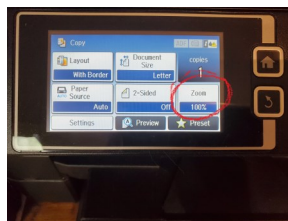

TO ENLARGE IT WITH YOUR PRINTER, FOLLOW THESE STEPS. It's easy!

1. Place photo or tracing into copy machine. This is what the setting looks like on my printer.

2. Once I press "COPY" a screen comes up with the option to Zoom (enlarge over 100%). I click "Zoom"

3. and a screen comes up with an option to enlarge. The red arrow you see here is pointing to a plus + sign. You press that to make the copy larger. It should be about 200% to make a 4 x 6 into an 8 x 11 or so.

You can also just take it to your local print shop.
